EXPERIENCE

micro1 Minneapolis, MN
Associate Strategic Project Lead September 2026 – Present

- Launched two multimodal coding data pipelines from zero for AI training. Defined task formats, requirements, quality standards and verification, and kept experts, reviewers and engineering aligned.
- Scaled to 300 experts and hundreds of tasks a week within the first weeks, screening candidates and building expert onboarding, reviewer promotion and the HDM team, with capacity planned for 2,500 tasks a month.
- Raised task quality through task seeding, clearer guidance, structured review templates and early quality audits.
- Cut task handling time, reducing cost per task.

xAI Milwaukee, WI
Software Engineer Specialist March 2025 – September 2026

- Developed and reviewed a dataset of approximately 2,000 high-quality tasks for training GenAI and coding agent models, emphasizing complex coding scenarios to enhance model performance in software development applications.
- Reviewed, evaluated, refined, and provided feedback on data contributions from team members to maintain high standards in the curation of LLM datasets.
- Contributed to interactive scripts to fully automate the build and launch of Docker containers, testing, communication with LLM APIs, and extraction of the results.
- Conducted final technical interviews to hire new Software Engineer Specialists with demonstrated open-source contributions, strong coding skills, and proficiency in using coding agents.
- Collaborated directly with researchers to engineer optimized prompts for training and evaluating the AI model, enabling automated assessment of rollouts for each new model checkpoint.

University of Illinois at Chicago Chicago, IL
Teaching Assistant for Secure Web App Development September 2024 – December 2024

- Developed web applications using Typescript, React, Next.js, and Supabase to help students apply, reinforce, and test the concepts learned during class.
- Automated testing of students' solutions using Vitest and Playwright, automatically grading a class of around 50 people.

University of Illinois at Chicago Chicago, IL
Graduate Assistant January 2024 – June 2024

- Developed and deployed a containerized web application on a physical server using Node.js, Express and React, featuring a text editor with IDE-like capabilities including syntax highlighting, enabling users to write and execute R code for real-time interaction with a MySQL database.
- Implemented Docker Compose for seamless orchestration and launch of the web application and MySQL database, ensuring efficient deployment, scalability, and cross-environment compatibility.

EDUCATION

University of Illinois at Chicago January 2023 — May 2025
Master of Science, Computer Science GPA: 3.88
Publication: Lost in Translation: Exploring the Risks of Web-to-Cross-platform Application Migration

Polytechnic University of Milan September 2022 — May 2025
Master of Science, Computer Engineering GPA: 110/110

Polytechnic University of Milan September 2019 — September 2022
B.S., Computer Engineering GPA: 110/110
Credit standing: Honors Cum Laude

PROJECTS

Electron Testing Framework 2025

- Engineered and developed a complete framework compatible with Web Platform Tests to thoroughly test the security of Electron's handling of HTTP headers and web security standards.
- Developed an Electron application and a Chrome extension that implement an algorithm to intercept and deviate HTTP requests to a predefined testing server.
- Manually defined fully automated tests for over 35 HTTP headers compatible with every browser.
- Developed an Express web server to orchestrate, provide and parse the results of multiple parallel test instances.

Freeroom 2022

- Raised €35.000 in funding.
- Developed and deployed a web application that interacts with the University's classroom API to identify empty classrooms given a set of filters and search query specified by the users, using ViteJS, ReactJS, ExpressJS and InfluxDB.
- Set up the web application to support live data from each classroom, to provide real-time information and aggregated data on occupancy, temperature, and noise levels.
